August 29, 2007

Gentlemen,

Please accept this letter as verification that Petty's Irrigation and Landscape Company has work on projects that I have designed and assisted through the construction phase of the projects. Petty's has demonstrated that they can competently handle projects of all magnitudes of sizes and scope of services. It has been my experience that Petty's uses a very high quality of plants and materials in the installation of landscape site development. Petty's has been the landscape and irrigation contractor on two of the new Tyler ISD elementary schools. They have installed plant material that are of the high quality that Tyler ISD and I demanded be installed at the new schools.

Petty's experience and quality of irrigation systems is well known throughout the East Texas area. It is always better to have one contractor for both the Landscape Development and the Landscape Irrigation system. This helps eliminate any conflicts that may arise between two contractors during construction and the warranty period of the project. Whenever any questions or situations have come to my attention, Petty's has always shown the desire and ability to address and correct any problems in a reasonable time frame.

My experience with Petty's warranty follow-up has been excellent. Whenever there have been warranty items, Petty's has addressed the situations without hesitation or complaint. Petty's Irrigation and Landscape Company project performance in the installation of landscape site development and irrigation systems has, in my estimation, always been one of striving to maintain high professional standards.

If you have any questions please do not hesitate to contact my office.

Sincerely,

David C. Scarborough, ASLA
Landscape Architect
