

Greetings to all of our **gardening** customers from

Nursery & Landscape Design Studio

Welcome to our new monthly newsletter. **Our goal is your success in your garden and yard!**

NOW is the time to start thinking about **roses**. You should be tidying up your rose plants with ornamental hips such as Rosa Rugosa that were not pruned after flowering. It's also time to begin planting new roses and to begin preparing the ground for roses to be planted in the spring. Or consider installing a completely new rose garden.

NOW is the time to plant **fruit trees**. Get them in the ground and growing a bit before that Texas heat sets in. Right now we do have many varieties to choose from. Most importantly, for your new and existing fruit trees, begin feeding them **NOW** for a bountiful crop. Spring is much too late to start fertilizing. We would be happy to advise you on feeding these trees, as there is nothing more satisfying than to grow and eat your very own fruit!

During this wintry, dormant season it's so nice to have a cheerful dose of living color in your home. May we suggest a wonderful houseplant, the **African Violet**. These beauties come in a rainbow of hues and are not difficult to care for. They can bloom continuously and live for decades. The oldest known African Violet-named Superman is 58 years old and still going strong!

Please come by and check out all of our beautiful trees, shrubs, roses, and indoor plants. A great top dressing type of **fertilizer** is our **Back to Nature Composted Cotton Burr**. We carry this product in 2 cu. ft. bags, which are easy to handle for almost everyone. So, visit or call and let our friendly staff aid you with any landscaping or gardening questions.

Remember, **your success with ALL of your gardening is our goal!**
